

ORC

Trading Software Analyst

We are seeking graduates or recent post-graduates to join our Vienna product specialist team.

We expect the successful candidate to quickly become a specialist in using our electronic trading and risk management products.

This is an exciting challenge for someone wanting to work with both IT and finance. You will be working closely with our customers on analysis and problem solving.

To be successful in this position you should have a finance or technology degree (Electrical Engineering, Informatics, Technical Mathematics or Technical Physics) strong mathematical skills, a keen customer service focus and a genuine interest in the financial markets and their products.

In Austria, Switzerland and Germany, Orc Software works closely with the trading floors of major banks in the respective countries. In addition we are participating in a number of interesting projects in the investment banking area and we always work closely together with the stock- and derivatives exchanges in the relevant geographies (in this case SWX/Virt-X, Deutsche Börse and Wiener Börse).

If you are interested in the above position, please send your resume to hr@orcsoftware.com or contact Anders Henriksson in our Vienna office

Orc Software GmbH
Köllnerhofgasse 6/3a
